

Magnetic Separator Products

Series CTZ : Permanent Magnetic Roller

To the powder, granular and bulk material or reclaim the iron impurities to protect the crusher, grinder and presser from ruining.

Series YCBG : Vertical High Gradient Magnetic Separator

Series YCBG movable magnetic separator for dry sand is a medium strong magnetic separation equipment and can be used to eliminate the ferromagnetism material from weak magnetic material such as the ore, marine sand and other lean ore. This equipment is composed of sieve, cloth device, frame, belt conveyor, magnetic separator and so on. The separation

Series LHGC : Vertical High Gradient Magnetic Separator

For weak magnetic metal ore such as hematite, limonite, siderite, chromate, wolfram, etc. as well as iron separation for purification of non-metallic mineral, such as quartz, feldspar, nepheline, fluorite, kaolin, etc.

Series CTB : Permanent-Magnetic Separator

For separate the wet magnetic particles or eliminate the waste magnetic from non-magnetic mineral.

Series RCYP : Permanent Magnetic Iron Separator

For different kind of working conditions, especially for removing the iron scrap from various material during the processing of conveying.

Series CF : Self Cooling Electric Magnetic Separator

It is widely used metallurgy, electricity, building material, mining and others industries.

Series RCDG : Dry Self - Cooling Electric Magnetic Separator

Usually suspended above the conveyor belt to remove the iron, to protect the crusher, mill.

Series RCDF : Self Cleaning Electric Magnetic Iron Separator

To eliminate the waste iron and protect extraction roll, crusher, mill and so on, suitable for various harsh environment.

Series RCDE : Series Oil - Cooling Electromagnetic Separator

To eliminate the waste and protect extraction roll, crusher, mill and so on, suitable for various harsh environment.

Series RCDEJ : Oil Forced Circulation Electromagnetic Separator

For the port coal transportation, big thermal power plant, mine and building material. It can also work in harsh environment such as dust, humidity, salt fog.

Series RCDA

It is suitable for the better environment with little dust to eliminate the waste iron and protect extraction roll, crusher, mill, and so on.

Series RCDA : Wind Cooling Suspension Electric Magnetic Iron Separator

It is suitable for the better environment with little dust to eliminate the waste iron and protect extraction roll, crusher, mill, and so on.

Series RCYA-4 : Grid Type Iron Separator

To remove the weak magnetic oxide from powder and fine particle minerals. It has been widely arranged in the lines such as ceramic, non-metal, refractory, glass, chemicals, and so on.

Series RCYA-3: Grid Type Iron Separator

To eliminate weakly magnetic oxide from liquor or pulp, It has been widely arranged in the lines such as non metal arranged in the lines such as non-metal mining, paper making, ceramic industry and so on.

Series RCYA-5 : Conduit Permanent Iron Separator

To eliminate weakly magnetic oxide from liquor or pulp. It has been widely arranged in line such as paper, refractory, medicine, foodstuff, and chemical industry so on.

Series RCYA : Pipe Line Permanent Magnetic Separator

It is widely used in cement industry, chemical, coal, building material, and so on industry.

Series RCDE : Series Oil - Cooling Electromagnetic Separator

To eliminate the waste and protect extraction roll, crusher, mill and so on, suitable for various harsh environment.

Series RCDEJ : Oil Forced Circulation Electromagnetic Separator

For the port coal transportation, big thermal power plant, mine and building material. It can also work in harsh environment such as dust, humidity, salt fog.

Series RCDA

It is suitable for the better environment with little dust to eliminate the waste iron and protect extraction roll, crusher, mill, and so on.

Series RCDA : Wind Cooling Suspension Electric Magnetic Iron Separator

It is suitable for the better environment with little dust to eliminate the waste iron and protect extraction roll, crusher, mill, and so on.

Series RCYA-4 : Grid Type Iron Separator

To remove the weak magnetic oxide from powder and fine particle minerals. It has been widely arranged in the lines such as ceramic, non-metal, refractory, glass, chemicals, and so on.

Series RCYA-3: Grid Type Iron Separator

To eliminate weakly magnetic oxide from liquor or pulp, It has been widely arranged in the lines such as non metal arranged in the lines such as non-metal mining, paper making, ceramic industry and so on.

Series RCYA-5 : Conduit Permanent Iron Separator

To eliminate weakly magnetic oxide from liquor or pulp. It has been widely arranged in line such as paper, refractory, medicine, foodstuff, and chemical industry so on.

Series RCYA : Pipe Line Permanent Magnetic Separator

It is widely used in cement industry, chemical, coal, building material, and so on industry.

Series HTK : Iron Separator for Magnetic Mine

It can match with the conveying system, and eliminate the magnetic impurities, such as the original ore, sinter ore, pellet ore, block ore and others. It can separate ferromagnetic material with the least mine to protect the crushers.

Series YCMW : Medium Strong Pulse Discharge Reclaimer

series YCMW medium strong pulse discharge reclaimer is the latest product designed by our company together with the Cina science Academy, This system has been widely popular in the production line such as metallurgy, mining, building material, power plant and coal industry.

Series CTG : Dry Magnetic Separator for Iron Sand

Removing the weak magnetic impurities from the fine and coarse powder material, it has been widely used in ceramic, glass, chemical, refractory industry.

Series CLFJ : Rare Earth Roller Magnetic Separator

It can used to eliminate weak magnetic oxide from fine powder material and has been widely arranged in the line such as : ceramic, glass, refractory, medicine, foodstuff and chemical industry .

Series DCXJ : Elektromagnetic Dry Powder Iron Separator

It can used to eliminate weak magnetic oxide from fine powder material and has been widely arranged in the line such as : ceramic, glass, refractory, medicine, foodstuff and chemical industry .

Series MW5 : Standard Scrap Transportation Electric Lifting Magnet

With the unique design for magnetic circuit, the coil is made from aluminum and the protecting board for coil is made from manganese board with the high performance.

Series PGT : Disc Type Vacuum Filter

It used to dehydration processing for metal, nonmetal solid and liquids product

Series FG : Screw Classifier for Iron Mining

Screw Classifier is a kind of traditional classifying equipment, In the function of gravity and principle that different sedimentation rates in the liquid, it is used classify the material. It can be widely arranged in the ore dressing plant.

About of Magnetic Separator

Magnetic Separation equipment is used to remove ferrous tramp metal contaminants from dry particulate, liquids, and slurries in the process of grain, feed, sugar, cereal, chemical, mineral, plastics, oil, textile, salt, pharmaceuticals, and recycled products to name a few. A partial list of Separation Equipment would include magnetic plates, grates, drawers, drums, humps, pulleys, spouts, and belts. These magnetic separators will ensure product purity and protect processing equipment from tramp metal damage.

Our product offers a wide range of magnetic separation equipment for capturing, controlling and removing ferrous tramp metal contaminants from products and processing systems. Our product magnetic separation products are available in standard sizes and strengths with effective designs to meet most conditions and applications.

Special designs, and engineering assistance are available for difficult applications. Our's magnetic separation products are designed for rugged use and easy installation in mechanical, gravity, or pneumatic conveying systems. Optimum performance is achieved when magnetic separators are placed at proper locations within
